Vazsonyi, A.

Paul Erdős, the world's most beloved mathematical genius "leaves". (In English)
PU.M.A., Pure Math. Appl. 7, No.1-2, 1-12 (1996). [ISSN 1218-4586]

This peculiar obituary gives an interesting picture of the personality of Paul Erdős, "the Albert Einstein of twentieth century mathematics". The author was a lifelong friend of Erdős from their common childhood in Budapest. Erdős was the youngest Hungarian Ph.D. in math and the author was the second. From the paper we can get to know Erdős's language, working and visiting habits, political attitude, outward appearance through several anecdotes.
